the VIDEO TUTORIAL

### 1. BONDING GEL

Apply the Bonding Gel on the brows working in small sections. Use the Y tool or the double sided comb to comb the brows in the desired position and press the brow hairs against the skin to secure them in place. Move on to the next section until all the brow hairs are lifted in the desired position.

### Y TOOL

It is used to place the brows in the desired position before applying the Brow Shaper and Brow Fixer. The Y tool has two sides; one side is small comb to detangle and brush the brows in the desired direction with precision, and the second side has a flat surface to press the brows against the skin to secure them in place.

### DISPENSER

Press the nozzle to dispense the product and use the flat surface of the nozzle to gently dab the product on the eyebrows.

**2. SHAPER** Leave to activate for 5 to 7 minutes in case of fine eyebrows. Leave for 7 to 10 minutes in case of medium or thick eyebrows.

**3. FIXER** Leave to activate for 5 to 7 minutes in case of fine eyebrows. Leave for 7 to 10 minutes in case of medium or thick eyebrows.

**4. SERUM** Apply the Brow Serum on the entire length of the eyebrows and leave to infuse for 3 to 5 minutes.

### DOUBLE SIDED COMB-APPLICATOR

The comb side of the brush can be used in conjunction with the Y tool to comb the brows into the desired direction, during and after the treatment. The applicator side of the brush provides an extra option to apply and remove the brow lamination lotions.
